

# Notanant Page Layout and CSS structure

CSS order	
Base:	main.css
Template style:	/Templates/.../template.css
Button style:	/Buttons/.../template.css
Text style:	/Text/.../template.css
Components:	/Text/.../template.css

**CSS design principles:** Buttons, Text and Components style sheets should be capable of sitting on any base Template. For instance component styling should not alter or presume anything about the base page structure. However there may be families of templates and button/text/component styles that can be linked together - eg with specific column widths.
